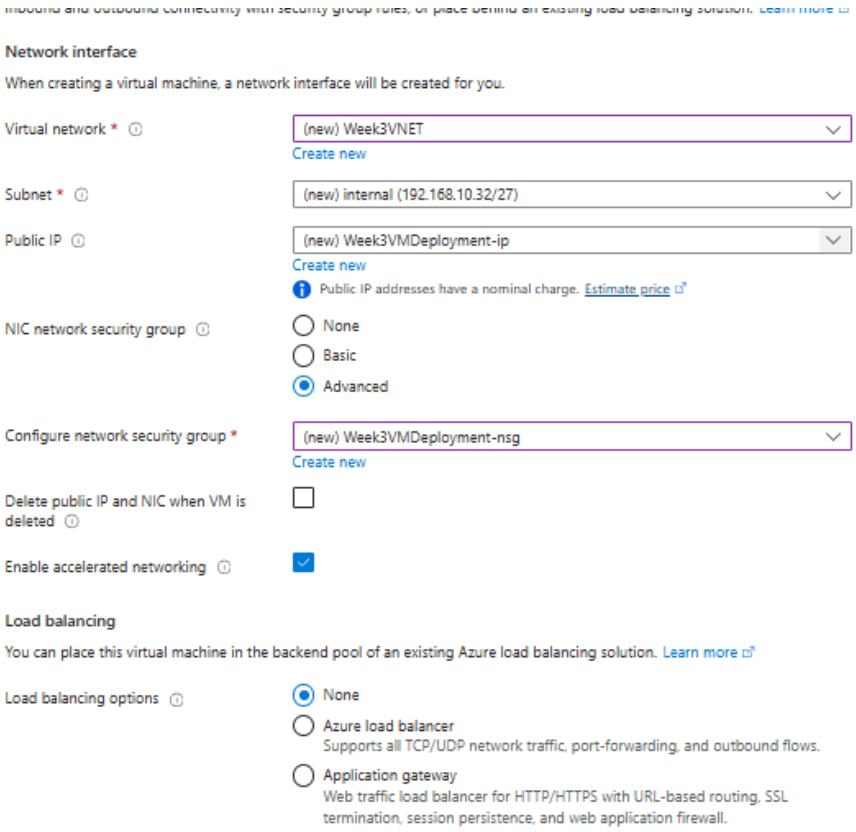
- Password

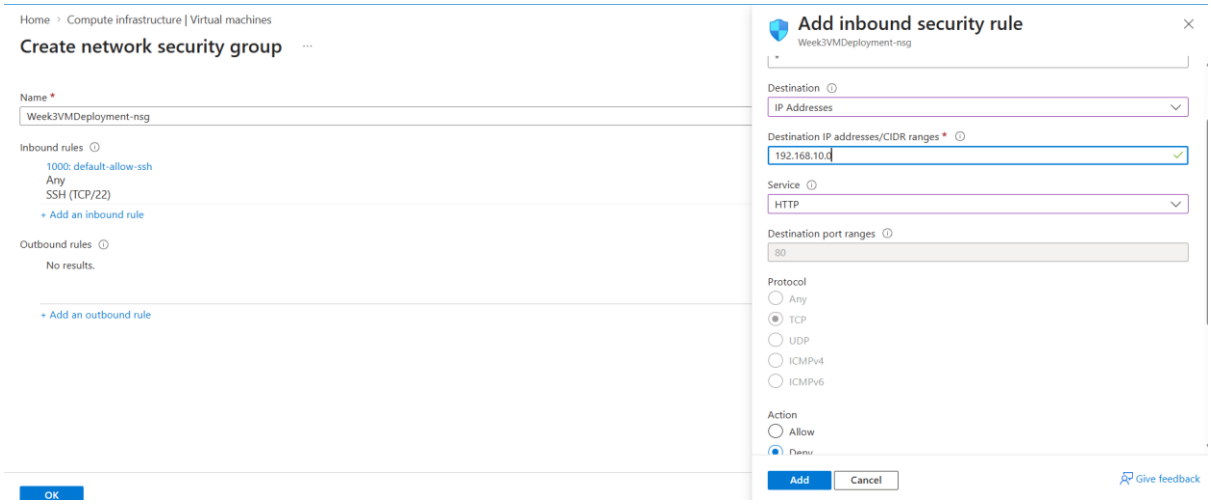
Azure now automatically generates an SSH key pair for you and allows you to

This deployment is a standard sized Unbuntu Linux deployment within the South Africa north region, It also uses SSH public keys as it provides superior security compared to simple passwords

## 3.2 Network Configuration



The VNet name is Week3VNET and it uses the public address space of 192.168.10.0 /24 and it contains a subnet named internal in the 192.168.10.32/27 space, this is done to create a small internal subnet. There is a simple NSG rule added and its to restrict any traffic from HTTP as it is not secure.



NSG rules.

## 3.3 Auto-Shutdown Configuration
