# NET731 — Advanced Networking

Practical Instruction Sheet | Week 3

CTU Training Solutions

| | |
|---|---|
| **Module** | NET731 — Advanced Networking |
| **Practical Title** | Azure Virtual Machine Deployment |
| **Week / Period** | Week 3 | 20–26 March 2025 |
| **Total Marks** | 10 |
| **Submission** | GitHub repository (screenshots + documentation) |

## 3. Task Requirements

### 3.1 Virtual Machine Deployment

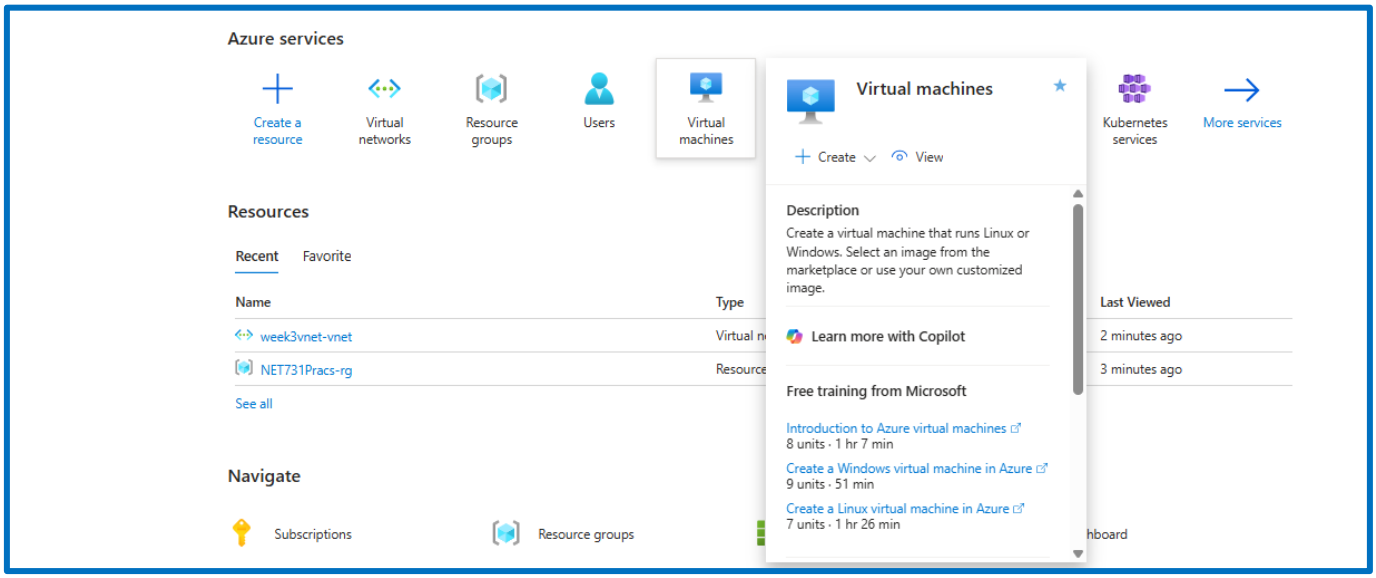

*Figure 1: Navigating to the VM resource*

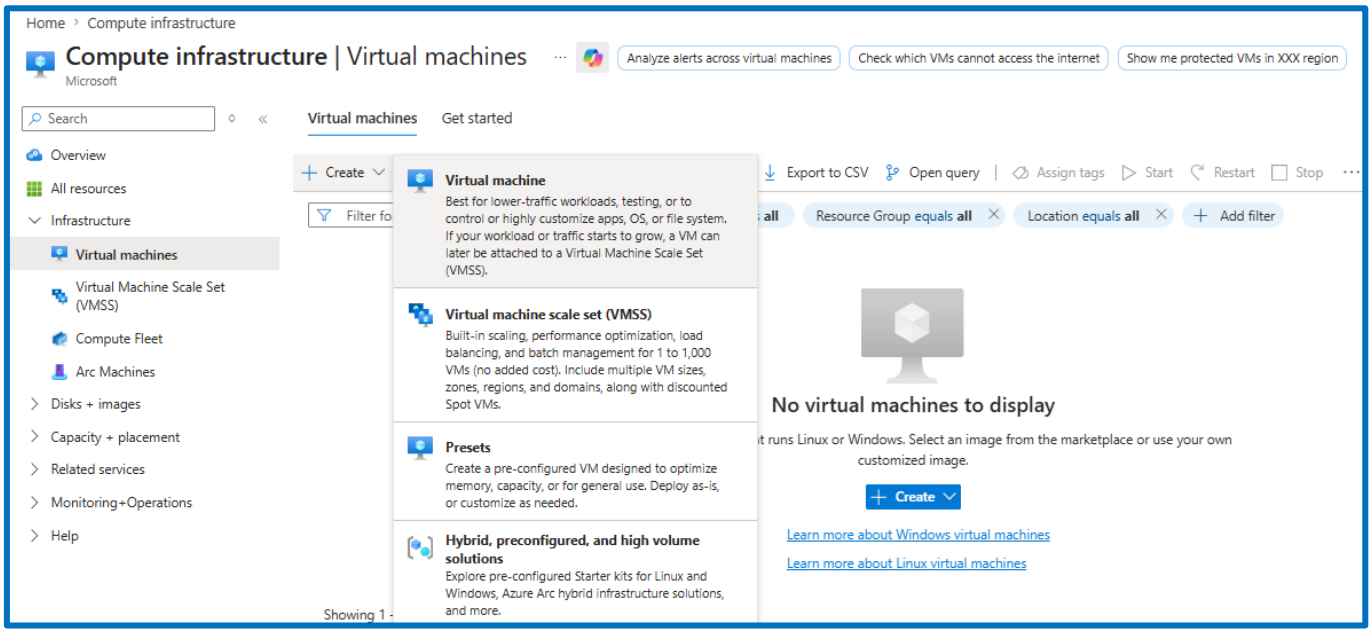

*Figure 2: Selecting the option of VM to deploy*

Week 3 Practicals

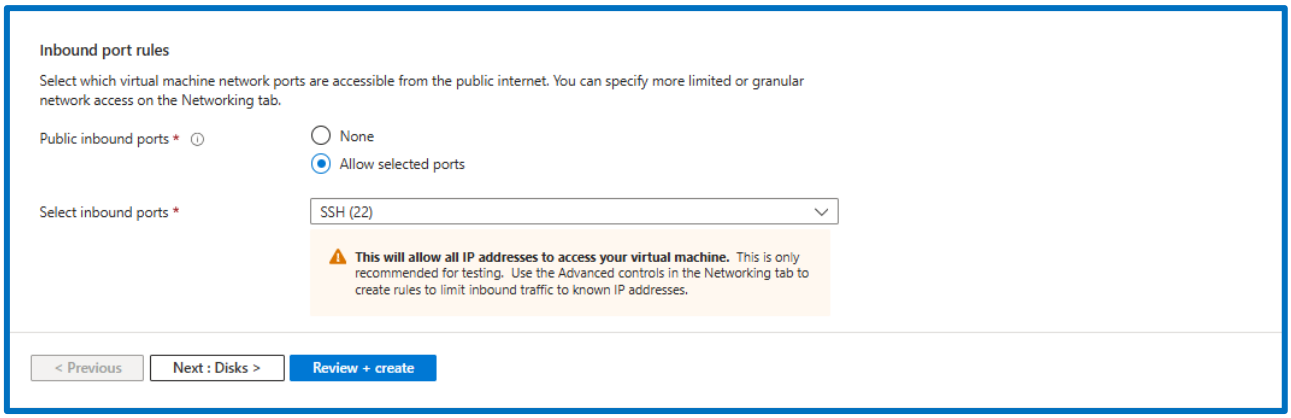

*Figure 6: Configuring the NSG rules, selecting allowed ports*

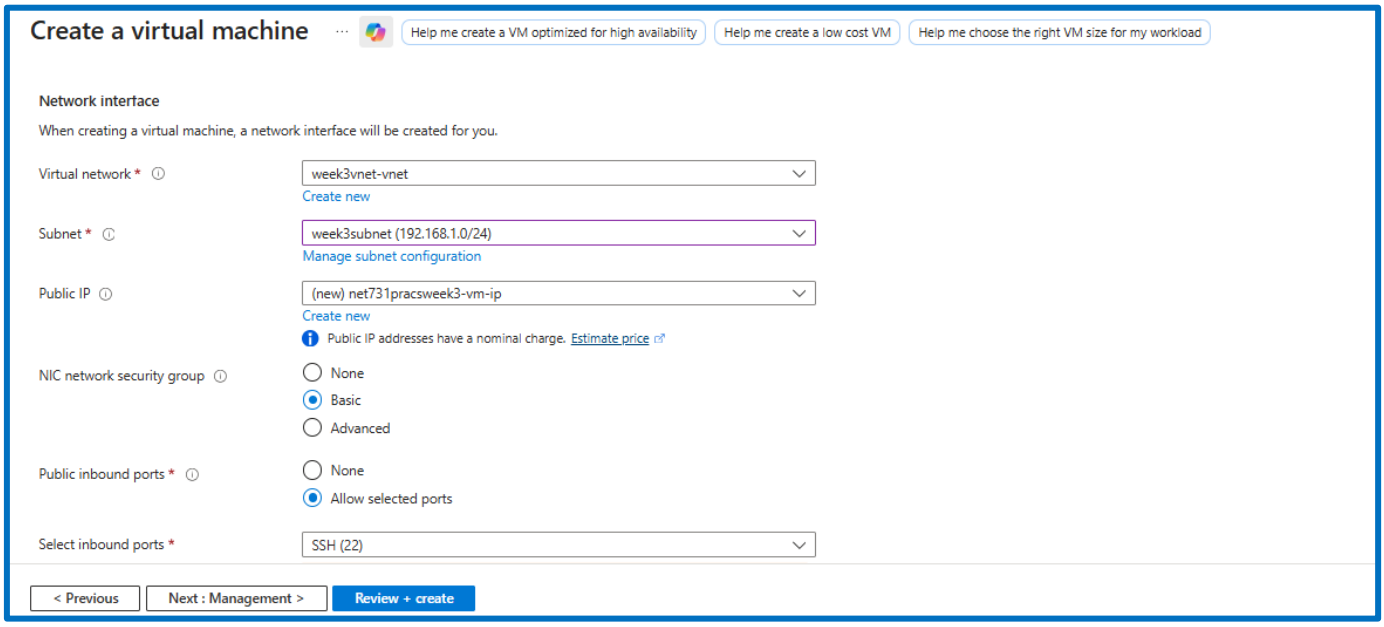

*Figure 7: Assigning the VM to the created vnet and subnet*

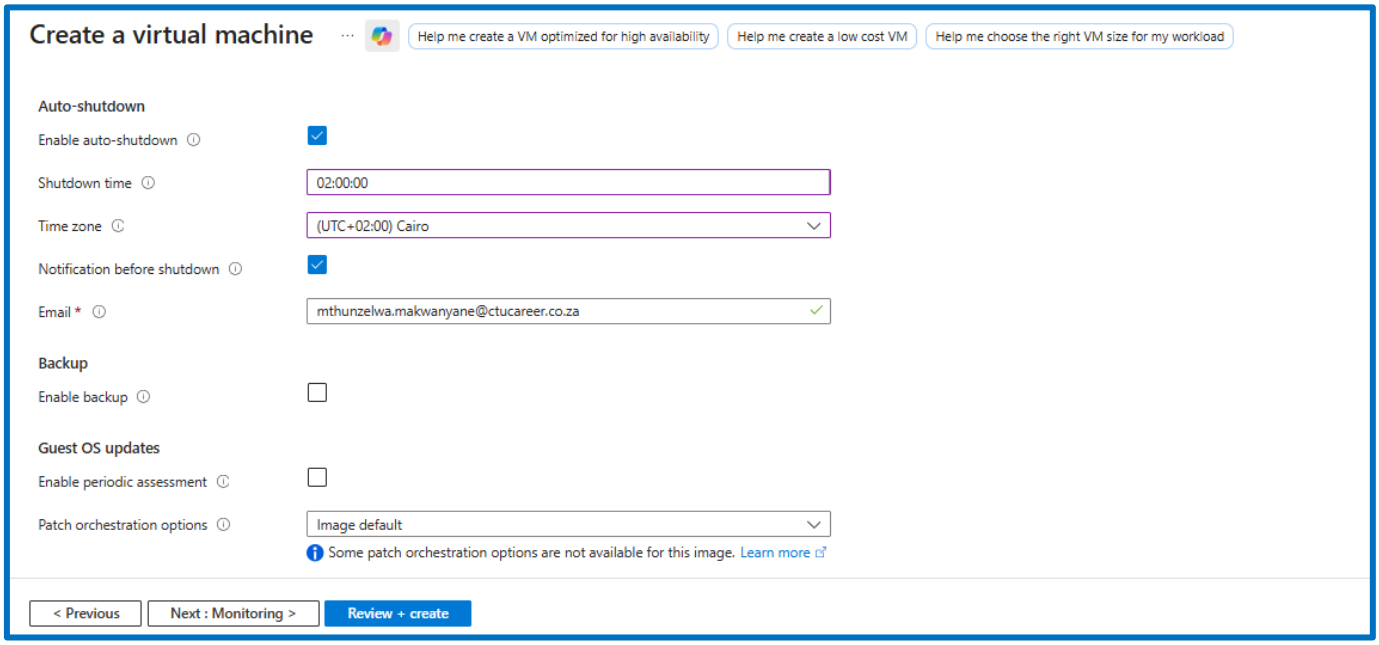

*Figure 8: Implementing auto-shutdown, selecting the time zone and specific time of shutdown*

Week 3 Practicals

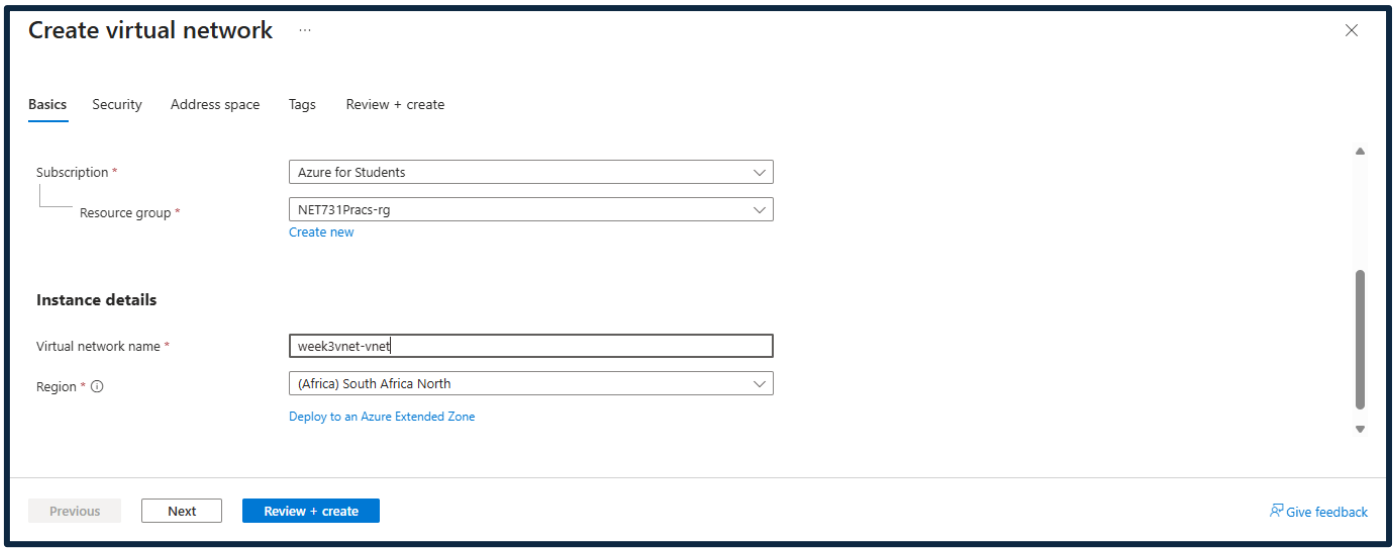

***Figure 12: Naming the resource and selecting where it will be deployed***

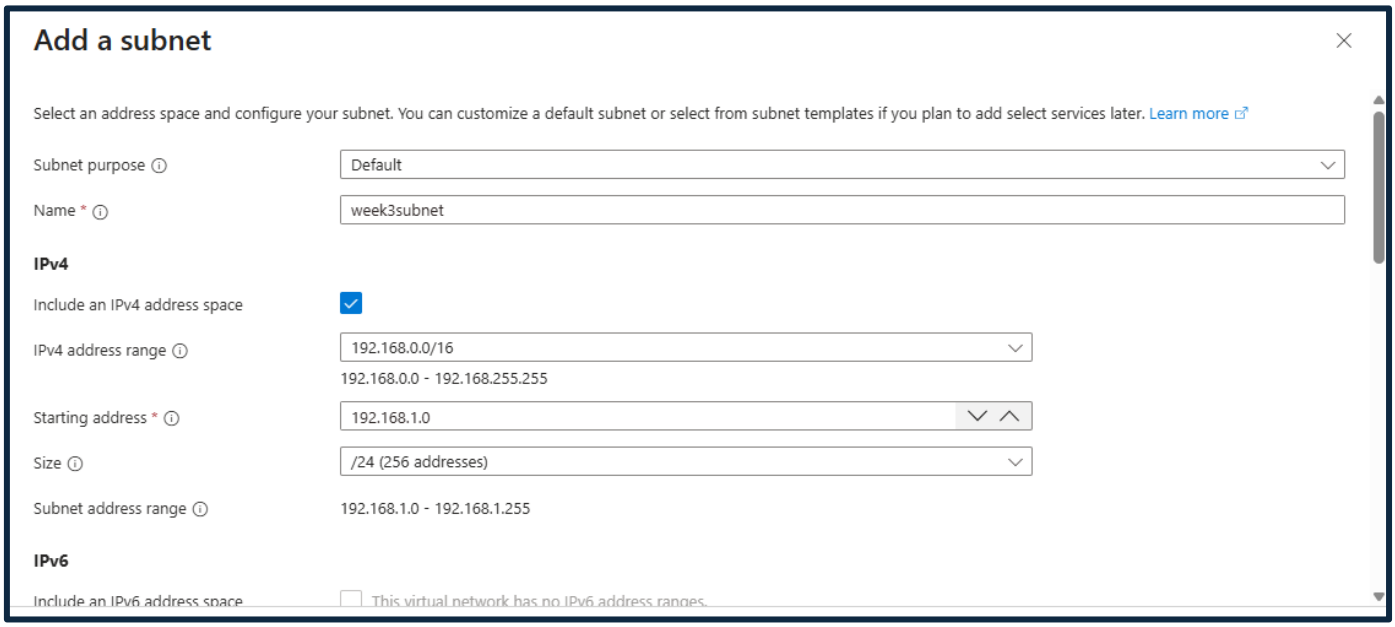

***Figure 13: Adding a custom subnet***

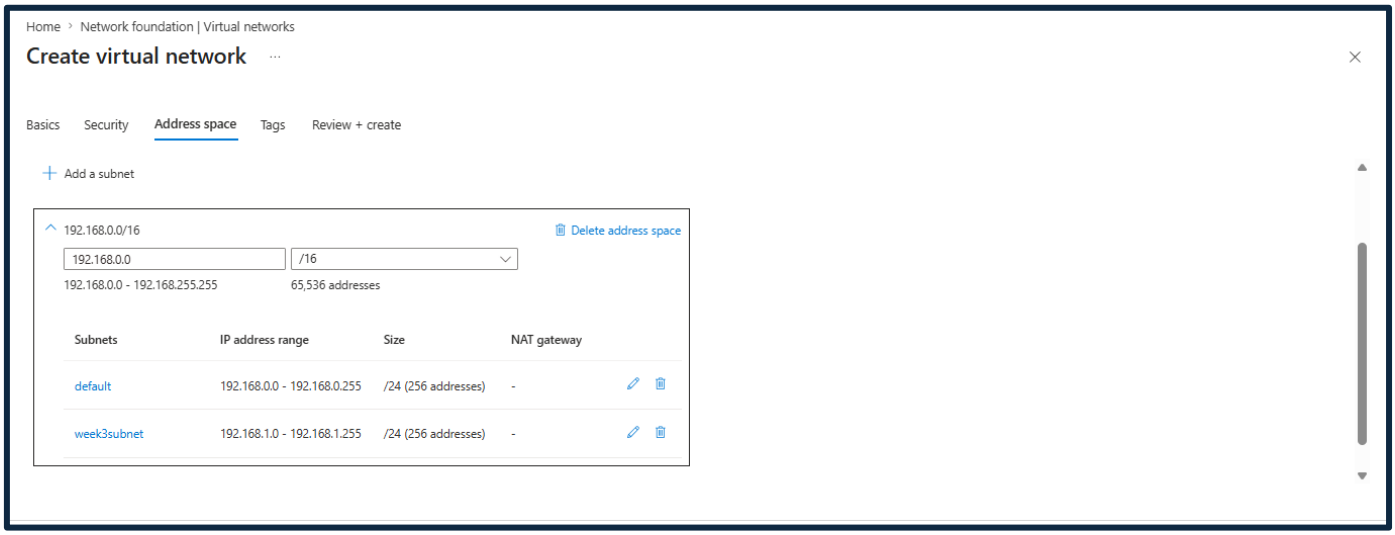

***Figure 14: Showing proof of the custom address and the added custom subnet***

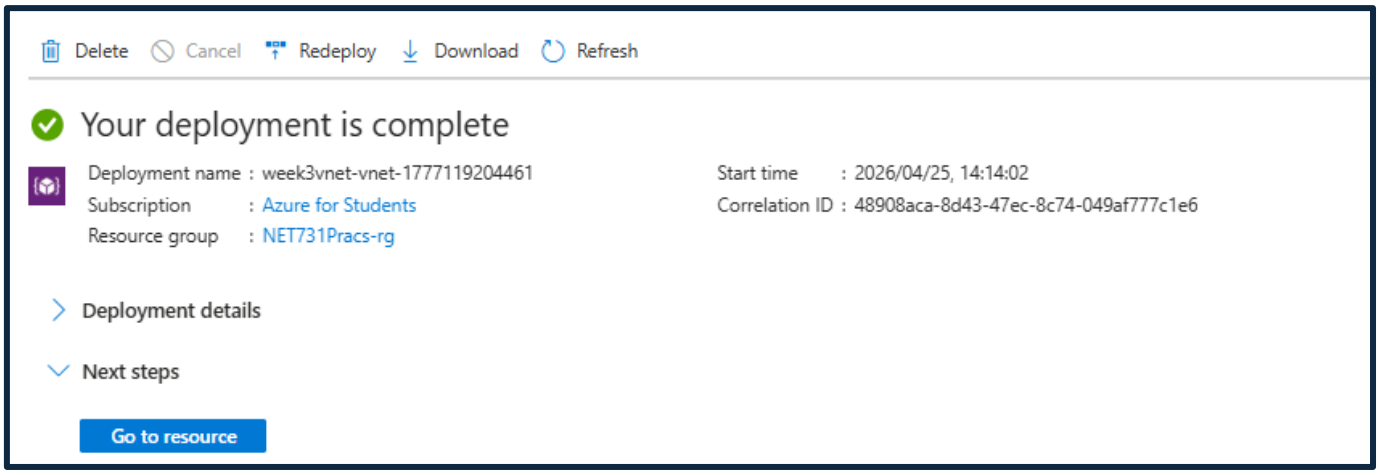

***Figure 15: Proof of successful deployment of vnet***

## 3.3 Auto-Shutdown Configuration

I already showed implementation of auto-shutdown in the deployment process of creating the virtual machine. Here I navigated to the virtual machine resource to show again how to implement shutdown if you happen to skip the option when creating the virtual machine.

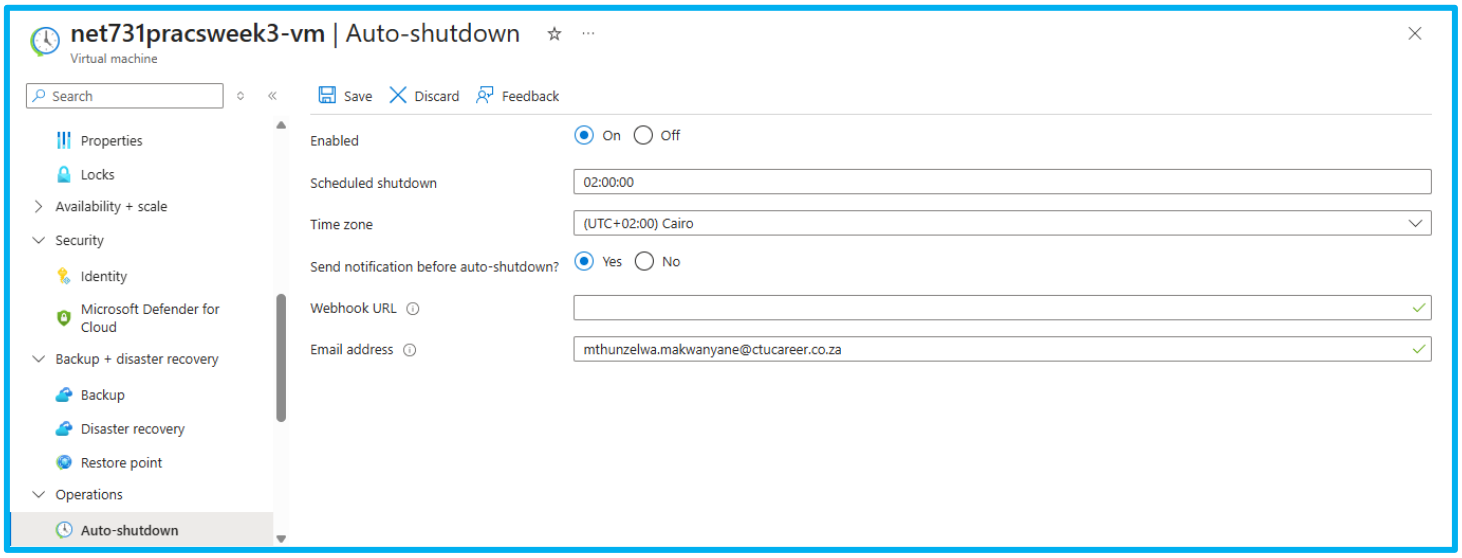

***Figure 16: Configuring the auto-shutdown scheduled time***

## 5. Mark Allocation

| Assessment Criterion | Marks |
|---|---|
| VM correctly deployed (B1s, correct OS, no template used) | 2 |
| Network configuration: custom VNet, subnet CIDR, Static public IP, NSG rule | 3 |
| Auto-shutdown enabled with appropriate time and written justification | 1 |
| Documentation: all required sections present, accurate, and clearly written | 2 |
| GitHub submission: correct folder structure, 4+ screenshots, repository public | 2 |
| TOTAL | **10** |
