Task 1 — Role-Based Access Control

/subscriptions/082cf81a-4b2a-4b4d-94cb-eb62f20925cb (7)

1B	1Bob 042b5835-ae5f-4ad0-ba22-cab7a8...	User	Contributor	This resource	None
1M	1mark efe570e3-c609-4cf3-b40c-ad889e1...	User	Reader	This resource	None
1W	1Wade fb0f2160-9179-4270-aa03-96dd9e...	User	Storage Blob Data Contributor	This resource	Add

The difference is the amount of access they have. Restricting the access to only being within the resource limits the scale of what a user can do. In this case Bob wouldn't be able to contribute to anything outside of the scope of the resource.

Task 2 — Network Security Group

Direction	Port / Protocol	Source / Dest	Action	Business Justification
Inbound	3389	Specific IP	Allow	Remote management of VM
Inbound	80 ,443	Any	Allow	Web application access
Inbound	Any	Any	Deny	Least-privilege default — block all other inbound
Outbound	443	Internet	Deny	Prevent data exfiltration from VMs

Inbound:

Filter by name | Port == all | Protocol == all | So

Priority	Name	Port
100	RemotemanagementofVM	3389
110	Webapplicationaccess	80,443
120	Leastprivilegedefault	Any

Outbound:

Priority	Name	Port	Protocol	Source
130	PreventdataexfiltrationfromV···	443	Any	Any

Task 3 — Storage Account & Containers

Name ↑	Type	Kind	Resource Group	Location	Subscription
internaldocuments1	Storage account	StorageV2	CTU-20233279-RG	South Africa North	Azure subscription 1
publicassets1	Storage account	StorageV2	CTU-20233279-RG	South Africa North	Azure subscription 1

Task 4 — Storage Access Permissions

Home › internaldocuments1 | Access Control (IAM)

Add role assignment

Role Members Conditions **Review + assign**

Role

Contributor

Scope
