Home > Storage center | Blob Storage

Create a storage account

Validation failed. Required information is missing or not valid.

Basics Advanced Networking Data protection Encryption Tags Review + create

Basics

Subscription	Azure subscription 1
Resource group	NetworkWatcherRG
Location	East US
Storage account name	africastorage
Preferred storage type	Azure Blob Storage or Azure Data Lake Storage Gen 2
Performance	Standard
Replication	Read-access geo-redundant storage (RA-GRS)

Advanced

Enable hierarchical namespace	Disabled
Enable SFTP	Disabled
Enable network file system v3	Disabled
Allow cross-tenant replication	Disabled

Task 4 — Storage Access Permissions (2 marks)

Configure access permissions for your storage containers so that:

- One container uses Private access (no anonymous reads) — access is controlled via the RBAC role assigned in Task 1
- One container generates a Shared Access Signature (SAS) token with a defined expiry and limited permissions (read-only is sufficient)

In your evidence document, provide the SAS token URL you generated (you may redact the last 10 characters of the signature for security) and state the expiry window you chose and why.

THINK

A SAS token grants access without requiring the caller to have an Azure AD identity. What are the security implications of sharing a SAS token via email? What would you do if a SAS token was accidentally exposed in a public GitHub repository?

CAUTION

Do not set container access to Blob (anonymous read). Your containers must use Private access with explicit permission grants. Anonymous public access is inappropriate for an internal repository and will not receive marks for this criterion.

Could not do task 4 due to limited subscription
