

Week 9

This was my practical where I made professional quality documentation of my entire Azure environment. For Task 1, I created an architecture diagram using draw.io with the official Azure icon set, showing my resource group, virtual network with both subnets, Network Security Group attached to the public subnet, virtual machine with its static public IP, storage account, and all traffic flows between components with arrows and a legend. I exported this as a PNG and saved it to docs/diagrams/architecture-diagram.png. For Task 2, I created a comprehensive technical document called azure-environment.md with four major sections. Section 1 documented every resource with its name, type, region, SKU, purpose, and dependencies.
