

Week 6

I worked as a security analyst for the Week 6 practical. I went to Microsoft Defender for Cloud. Looked at my environments security. I wrote down my Secure Score percentage and found the top three active recommendations. The biggest problem I found was that my SSH management port was open to the internet. This is a way for people to do brute force attacks. I took a screenshot before I fixed it showing the problem. Then I fixed it by changing the NSG inbound rule source from Any, to my public IP address. I took another screenshot after I fixed it to show that it was done. For my fix I turned on OS updates using Azure Update Manager. I set it up to check for updates regularly and to install them on a schedule. This way my VM would automatically get security patches.

The screenshot displays the Microsoft Defender for Cloud web interface. At the top, the navigation bar includes the Microsoft Azure logo and a search icon. Below the navigation bar, the breadcrumb path is 'Home > Microsoft Defender for Cloud'. The main heading is 'Microsoft Defender for Cloud | Recommendation...' with a subtitle 'Showing subscription 'Azure for Students''. A 'Service menu' link is visible. Below this, there are action buttons: 'Edit columns', 'Refresh', 'Download CSV report', 'Open query', and 'Governance report'. A filter section shows 'Environment type' with various cloud providers and their counts: Azure (1), AWS (0), GCP (0), GitHub (0), AzureDevOps (0), GitLab (0), Docker Hub (0), and JFrog (0). Two informational messages are displayed: one about providing feedback on recommendations and another about individual recommendations appearing alongside grouped ones. Below these messages, there are tabs for 'All', 'Misconfigurations', 'Vulnerabilities', and 'Secrets'. The 'All' tab is selected, showing a score of 0. A bar chart indicates the distribution of findings by severity: Critical (0), High (0), Medium (0), and Low (0). There are also icons for 'Active attack paths' (0) and 'Overdue recommendations' (0). At the bottom, there are view options: 'Flat list' (selected), 'By Title', and 'By Resource'. A search bar is located at the very bottom with the placeholder text 'Search by title / resource'.
