

Budget Configuration Summary

Two alert thresholds were configured — 80% actual spend and 100% forecasted spend. The 80% actual alert provides an early warning when real spending approaches the limit, allowing time to take action. The 100% forecasted alert warns when Azure predicts the budget will be exceeded even before it happens, enabling proactive cost control rather than reactive responses."

Cost Analysis Summary

Cost Analysis revealed a total spend of \$0.52 for the current period. The highest cost resource was Storage at \$0.33, followed by Virtual Network at \$0.19. Virtual Machines showed \$0.00 as VMs were deleted or deallocated after each practical session to avoid unnecessary charges. Deallocating a VM stops compute charges while retaining the configuration, whereas deleting removes it entirely. The projected monthly spend based on current usage is well below the \$100 budget threshold."

Reflection Questions

What surprised you most about your Azure spending?

The most surprising finding was how quickly storage and networking costs accumulate even without any VMs running. Resources like Virtual Networks and Storage Accounts continue to incur small charges even when idle, which highlights the importance of cleaning up unused resources after each practical session.

How would cost management differ in a production environment?

In a production environment, cost management would be far more complex and critical. Resources cannot simply be stopped or deleted to save costs as they serve live users. Instead, strategies like reserved instances, auto-scaling, right-sizing, and tagging resources by department or project would be used to optimise spending without impacting availability.

What additional features would you explore?

Given more time I would explore Azure Advisor cost recommendations, which automatically suggests ways to reduce spending based on actual usage patterns. I would also investigate Cost Allocation rules to split costs across departments, and the Exports feature to schedule automated cost reports for stakeholder review.
