Task 2 – Define Business Requirements

Based on the CTU Training Solutions scenario, you need to document what the business needs from its Azure environment. In a Word document, answer the following:

Business Requirements to document:

- What type of organisation is CTU Training Solutions? (Size, industry, purpose)
- What are the main IT needs of the organisation? (Consider: staff, students, data, applications)
- Why would a cloud solution (Azure) be more beneficial than on-premises infrastructure for CTU?
- What security and compliance requirements should be considered?
- What is the expected number of users who will access the cloud environment?

 This must be a minimum of one A4 page. Use Calibri font size 11. Include Harvard references (minimum 5). Include your Declaration of Authenticity.

Task 3 – Identify Required Azure Services

Based on the 10-week project plan, list and describe each Azure service you will use. Use the table below as a guide for your documentation:

Azure Service	Purpose / Why you need it	Week it is used
Resource Group	A logical container that groups all the capstone resources, makes it easier to find resources and understand billing better.	Week 1
Virtual Network (VNet)	A secure and isolated network for private communications between the virtual machines and cloud services.	Week 2
Virtual Machine (VM – B2s)	The compute infrastructure to host our web application or test server while cutting operating costs.	Week 3

Microsoft Entra ID	Used to manage user identities and use multi factor authentication and also we will use it to control access polices for students and staff.	Week 4
Network Security Group (NSG)	Acts like the virtual firewall to filter inbound and outbound traffic and using the strict allow and deny routing rules.	Week 2
Azure Storage Account	Provides a scalable object storage for the application data, the virtual machine diagnostics and the automated backups.	Week 5
Microsoft Defender for Cloud	Always monitoring the security posture of the infrastructure and this provides an actionable threat protection alert.	Week 7
Azure Monitor	This collects all the vital telemetry data to keep track of the performance and health of the network resources.	Week 8
Azure Cost Management	Tracks all cloud spending against the preset budgets which prevent billing over charges.	Week
