

Naming Convention:

The username format used is `firstname.lastname@domain.onmicrosoft.com` (e.g. `alex.mokoena@novatech.onmicrosoft.com`). A consistent naming convention is critical in enterprise environments because it makes accounts predictable and easier to manage at scale, simplifies auditing and access reviews, reduces the risk of duplicate accounts, and ensures helpdesk staff can locate accounts quickly without ambiguity.

Group Type:

Security groups were used rather than Microsoft 365 groups. Security groups are designed specifically for controlling access to Azure resources and assigning RBAC roles, which is exactly the requirement for Project Orion. Microsoft 365 groups are better suited for collaboration tools like Teams and SharePoint, not resource access control.

Principle of Least Privilege:

The principle of least privilege means giving users only the minimum level of access they need to perform their job — nothing more. For Project Orion this means the Development team gets Contributor access to deploy resources, Operations gets Reader access to monitor without making changes, and Finance gets Billing Reader access to cost data only. No group was granted Owner or Global Administrator rights as this was not required for their roles.

User and Group Summary

Display Name	Username	Department	Job Title	Group
Jayden Hamilton	<code>jayden.hamilton@[domain]</code>	Development	Junior Developer	proj-orion-dev
Jordan Nkosi	<code>jordan.nkosi@[domain]</code>	Development	Senior Developer	proj-orion-dev
Sam Dlamini	<code>sam.dlamini@[domain]</code>	Operations	Systems Administrator	proj-orion-ops
Taylor Khumalo	<code>taylor.khumalo@[domain]</code>	Operations	IT Operations Analyst	proj-orion-ops
Morgan Sithole	<code>morgan.sithole@[domain]</code>	Finance	Financial Analyst	proj-orion-finance
Casey Ndlovu	<code>casey.ndlovu@[domain]</code>	Finance	Finance Manager	proj-orion-finance

Group Design Justification:

Three security groups were created to mirror the departmental structure of NovaTech Solutions. Grouping users by department rather than assigning roles individually simplifies access management, when a new developer joins, they simply get added to proj-orion-dev and automatically inherit the correct permissions. This approach scales efficiently and reduces the risk of misconfigured individual role assignments.
