1. Virtual Machine Deployment Summary

Summary Table	
VM Name	VM-Week3
Region	South Africa North
VM Size	Standard B2ts V2
OS	Ubuntu Server 22.04 LTS
Resource Group	NET731-Week3

2. Network Summary

Summary Table	
VNet	Vnet-week3
Address Space	22.0.0.0/18
Subnet	subnet-week3
Subnet CIDR	22.0.1.0/24
Public IP	Static
NSG Rule	Allow SSH (22)

3. Auto Shutdown Configuration

The auto-shutdown feature is used to disable the Virtual Machine when not in use to reduce costs and resource consumption. It shuts down the virtual space at the chosen time each day to keep costs low. The time was set to 20:00 PM because the VM won't be in use any time after the shutdown time, promoting good cost efficiency of cloud environments and reduces unused resources.

4. Reflection

I struggled with the initial Size configuration for the VM, the subscription I currently use does not support Standard B1s for any region, but after some consideration I chose Standard B2ts for it is still a low cost alternative to the B1s, ensuring I still consider cost efficiency.
