

Azure Defender for cloud

Security Posture

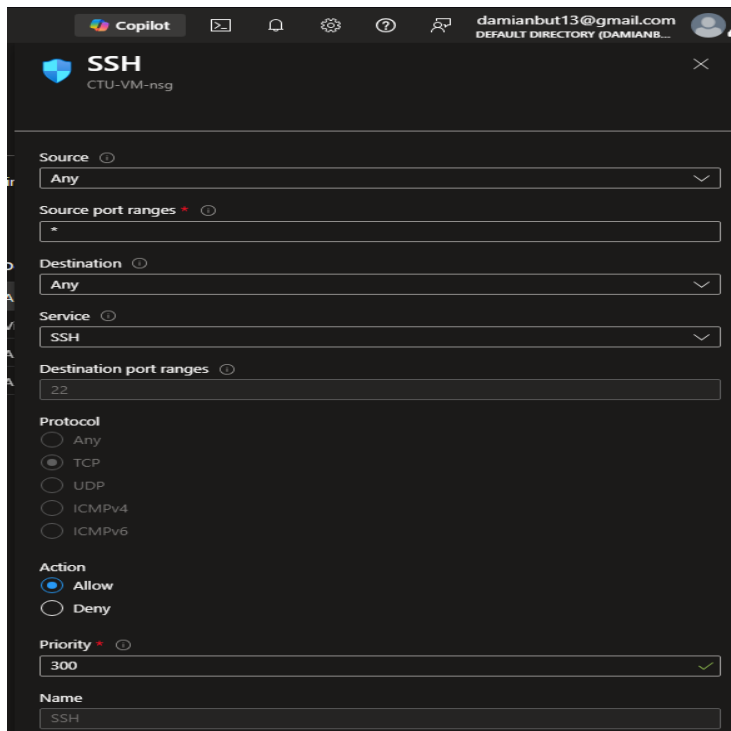

This is the cloud's readiness to be able to defend against any type of cyberattack. This score helps you understand how safe the cloud environment is. This can be important since if a cloud has a lower score the more vulnerable it would be to an attack. I currently don't have an score since Azure is not able to assess any of my resources

Recommendations

I currently don't have any recommendations. Recommendations is suggestions that MS defender for cloud picks up that can be followed to help improve the security of the cloud. The severity of the recommendations are based of how impactful these would be to the cloud.
