

Week 8 net practical

Task 1; create azure budget alerts

[Home](#) > [Cost Management + Billing](#) | [Cost Management](#) > [Cost Management: Lee-Roy Daniels](#) | [Overview](#) > [Lee-Roy Daniels](#) | [Budgets](#)

Create budget

Budget

Budget scoping

The budget you create will be assigned to the selected scope. Use additional filters like resource groups to have your budget monitor with more granularity as needed.

Scope  Lee-Roy Daniels

Filters 

Budget Details

Give your budget a unique name. Select the time window it analyzes during each evaluation period, its expiration date and the amount.

*Name 

*Reset period 

*Creation date 

*Expiration date 

Budget Amount

Create budget ...

Budget

* Alert conditions

Type	% of budget	Amount	
Actual cost	80	80	
Actual cost	100	100	
Select type	Enter %	-	

* Alert recipients (email)

Alert recipients (email)

20240337@ctucareer.co.za

example@email.com

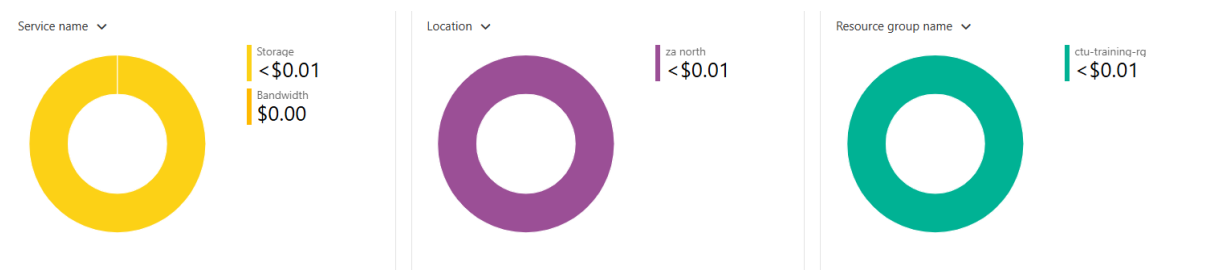

It is recommended to add azure-noreply@microsoft.com to your email allow list to ensure alert mails do not go to your spam folder.

+ Add Refresh Feedback Help

Scope: Lee-Roy Daniels Search by name All periods

Name	Scope	Reset period	Creation date	Expiration date	Budget	Forecasted	Evaluated spend	Progress
studentbudget	3b7b469c-9140-4e4...	Monthly	5/1/2026	4/30/2028	\$100.00		\$0.00	0.00%

Task 2 : monitor usage and adjust resource settings

Reflection questions

17. What surprised me most about my Azure spending this week was how quickly costs can increase even when only a few resources are running. Virtual machines and security services contributed more to the total cost than expected.

18. In a real business production environment, cost management would be much more important because the company could be running many users, applications, and services at the same time. Another thing is unlike a student environment where production systems can simply be shut down if they are not needed by the student. In a real-life environment, it can't work like that; it would be needed by customers. That is why so companies often use scaling, reserved instances, and detailed reporting.

19. I would like to explore more of the Azure cost management. Another feature that I would like to look in to would be setting up automated actions and alerts like this one.
